Notes

1. Only the vowel forms that appear at the beginning of a syllable are listed; the forms used for vowels following a consonant can be found in grammars; no distinction between the two is made in transliteration.
2. The vowel *a* is implicit after all consonants and consonant clusters and is supplied in transliteration, with the following exceptions:
   (a) when another vowel is indicated by its appropriate sign; and
   (b) when the absence of any vowel is indicated by the subscript symbol (�េ) called *hasanta* or *birāma*.
3. ব is used both as a labial and as a semivowel. When it occurs as the second consonant of a consonant cluster, it is transliterated *va*. When ব is doubled, it is transliterated *bba*.
4. *Candrabindu* before guttural, palatal, cerebral, and dental occlusives is transliterated *n̐*. Before labials, sibilants, semivowels, the aspirate, vowels, and in final position it is transliterated *m̐*.
5. When doubled, *abagraha* is transliterated by two apostrophes (").
