Register online here!
Free, but advanced registration is required. Login information will be sent to registrants 24 hours in advance.

Please notify FEDLINK at fliccfpe@loc.gov if you cannot attend to allow those on the waiting list an opportunity to register.

Digital Bedrock

Every organization has a need to keep their digital content safe and evergreen. Addressing this challenge requires the active monitoring, constant actions, and complex metadata creation that only comes through true digital preservation.

Digital Bedrock is a managed, secure digital preservation service provider. Digital Bedrock is a partner in an organization's overall preservation strategy, actively monitoring digital content to protect bit integrity and identify obsolescence vulnerabilities while securely storing data offline in geographically dispersed locations.

While all preservation work is performed offline, the company's location in a direct connect data center enables it to connect to cloud storage providers to download data for preservation, or upload the data after preservation is completed.

Digital Bedrock provides long-term reliability, authenticity, and security to meet discovery requirements for law enforcement, government agencies, and the legal profession. The company also offers consulting services in digital preservation assessments, collection assessments, metadata audits and schema development, and software development.

Online Demo Details
Linda Tadic, Founder and CEO, will describe Digital Bedrock's services and workflow, demonstrating its software and portal where clients search and view their preserved content.
