Digital Science equips federal libraries and agencies with tools to discover, analyze, and act on research data. Our platforms connect publications, datasets, grants, policies, patents, institutions, and researchers in one integrated environment – accelerating discovery, supporting smarter collection development, and enabling data-driven decisions. Our secure, FEDLINK-available solutions replace manual work with scalable tools that automate insights and reporting. Librarians and research staff can track funding, analyze collaboration, and measure impact, without juggling fragmented systems. Whether supporting researchers, guiding strategy, or demonstrating the impact of federally funded science, Digital Science helps you work more efficiently and tell a clearer story with data.

Federal research libraries are under pressure: deliver more insight, with fewer staff, and prove the value of every taxpayer dollar. Yet most teams are still spending weeks wrestling with fragmented data and outdated workflows. Manual reviews and siloed systems can't keep up with today's needs for accountability and faster decision-making.

The Dimensions web app changes the equation. With Dimensions, federal librarians can:

- Cut review times from weeks to hours
- Track funding, collaboration, and policy impact in one connected view
- Build dashboards with audit-ready evidence
- Support oversight, compliance, and mission-driven research

Join our webinar to see how federal libraries are moving beyond "good enough" tools to platforms that scale with the mission and delivering insights fast enough to have impact.
